SUMMARY

Cybersecurity student in my third year, with two years of hands-on experience in **Web Application Penetration Testing** and six months of experience in **OSINT and Social Engineering**. I actively participate in **CTF challenges** to strengthen my practical skills, while continuously learning through technical write-ups and cybersecurity books. I also have a background in **Web Development**, allowing me to understand web applications from both a developer's and security tester's perspective.

EDUCATION

Bachelor's Degree in Cybersecurity, Helwan International Technological University (**HITU**)

Expected Graduation: 2028 | Third-Year Student

HANDS-ON EXPERIENCE

Web Application Penetration Testing 09/2024 – Present

- Two years of hands-on experience testing **web applications** through security labs, personal projects, and CTF challenges, with continuous learning from technical write-ups and cybersecurity books.
- Testing **authentication, access control, session management, input validation, and application logic** to identify and exploit vulnerabilities.
- Building and developing web applications for security training, then testing their defenses and applying appropriate security measures.
- Developing scripts and small tools to automate **reconnaissance** and security testing.

OSINT & Social Engineering 03/2026 – Present

- Developing practical skills in **OSINT and Social Engineering** through hands-on training and security challenges.
- Practicing information gathering and analysis within different security scenarios.

Web Development 01/2024 – 09/2024

- Learned and developed websites and simple web applications to build a solid understanding of frontend and backend fundamentals.
- Built a foundation in web development that later supported my understanding and security analysis of web applications.

COURSES

Web & Cybersecurity

- OWASP Top 10 (Web) — MaharaTech (ITI)
- Cybersecurity for Beginners — MaharaTech (ITI)
- Cyber Security — Omal Misr Complex
- eJPTv2 Preparation — Udemy

Networking, Linux & Systems

- CCNA Network Fundamentals — Simplilearn
- Red Hat System Administration I & II — MaharaTech
- Ubuntu Linux Essentials — MaharaTech

Programming

- Python, C++, JavaScript, PHP & SQL — Simplilearn
- HTML & CSS — MaharaTech

PROJECTS

Web Security Vulnerability Labs

Built and tested a collection of custom web applications and security labs using PHP, SQL, JavaScript, Node.js, and Express, covering practical scenarios such as XSS, SQL Injection, RCE/Command Injection, Authentication Bypass, Prototype Pollution, and GraphQL vulnerabilities, with hands-on exploitation, security testing, and remediation to understand vulnerabilities from both attacker and developer perspectives.

Recon Automation Toolkit

Developed a Python tool to automate parts of the reconnaissance process, integrating Amass and httpx while organizing results into clean, structured outputs for security testing.

Automated Caesar Cipher Cracker

Developed a web-based tool using HTML, CSS, and JavaScript that automatically tests all Caesar Cipher shifts and identifies potential plaintext results.

WiFi Deauther — University Team Project

Contributed to the software and hardware development of a university project focused on simulating WiFi Deauthentication attacks.

SKILLS

Web Application Security & Vulnerability Testing | OSINT & Social Engineering |
Security Research & Threat Awareness | Programming, Scripting & Security Automation |
AI-Assisted Security Research | Continuous Learning & Skill Development

LANGUAGES

Arabic (Native) | **English** (B1 Intermediate level)
